

# Gamma Solutions, LLC

**Gamma Solutions** is a unique technology consulting company that combines both strategic and tactical solutions to clients across multiple industries. We take pride in being a **GLOBAL DIGITAL DISRUPTER** in every sense of this brand promise...

- **GLOBAL** because the company caters to a broad client base across North America, Europe, and Asia primarily in the Healthcare, Life Science, and Financial Technology industries.
- **DIGITAL** acknowledges the enabling role technology plays in fueling corporate growth. Gamma assists its clients to succeed in their ever-changing digital transformation journeys.
- **DISRUPTER** reflects the fundamental fact that one often needs to undo past technological solutions to achieve today's technological successes. And to then continue being successful requires a carefully curated skillset as well as an ability/willingness to change as conditions and technologies advance. This is **Gamma Solutions** "unique mission and value" – driving and enabling technological changes while mitigating the pains and expenses that are often associated.

Gamma Solutions consultants deliver a combination of business acumen, technical expertise, and personalized care to each assignment. This clearly reflects **Gamma Solutions'** Founder and CEO, G.-A. Morin's personal and professional reputation for integrity, a hand-on/get-it-done approach, and ongoing communication with his client partners. Regardless of the assignment, **Gamma Solutions'** commitment ensures agreed-to measurable results in a timely fashion for each assignment!

And over time, **Gamma Solutions'** primary successes have been to address the digital and strategic business challenges that can't currently be solved by a client's in-house resources, examples of which include:

- Europe: Assisted a prominent European-affiliated pharmaceutical corporation in preparing eleven of its leading research and development laboratories for relocation to its forthcoming flagship research facility. This entailed equipping these laboratories with state-of-the-art research infrastructure, which would establish a global benchmark for the company's research endeavors.
- Canada: Developed a scalable cloud-based workflow management system to automate repetitive manual tasks. This enabled a large Canadian documentation company to market a groundbreaking approach to servicing these documentation needs.
- US: Engaged initially to evaluate the IT Operations Organization of a medium-sized domestic biotechnology company, Mr. Morin personally assumed the role of Interim Executive overseeing IT operations and security. His responsibilities encompassed recruiting a successor while managing the execution of several strategic initiatives, the most important was holding the incumbent Managed Service Provider accountable for their performance.

Additional information about **Gamma Solutions** services and history is available on request.
